Integrated Ethiopian commodity exchange Regulatory System.

This project is mainly focus on automation of Ethiopian commodity exchange authority manual system. In our Development team, my tasks were:
developing web backend using C# with ASP.NET Core.
developing front-end using angular with Angular Material component library.
developing API using C# .Net core(2.2 and 3.1) to communicate with angular applications.
Styling web page using CSS
Structuring web page using HTML
developing report using Devexpress.
developing database using Microsoft SQL Server.
Responsible for designing databases and implementation.
Responsible for creating, modifying and optimizing SQL queries (Stored Procedure).
Using Git for versioning management and Gitlab for hosting.
developing web service to serve communications between Ethiopian commodity exchange authority and Ethiopian commodity exchange using Worker service, Quartz library for Scheduling
The applications was completed enough to be used by Ethiopian Commodity exchange authority.
Reduced the work load of employee for monitoring exchange actor because the employee is not physically present to monitor each exchange actor, they can see online what exchange actors do.
Reduced the paper wastage because dates transferred by system from one department to other department.
